

The Design Event

Design is the creative assembly of ideas and information into a buildable vision. It's the fun part.

The design stage is the part of the process where all of the information, from the history to the current context through the market study to the desires of the people involved, is transformed into a product that will be constructed into the urban environment.

The charrette is the most efficient way to bridge the stages of Info Gathering and Implementation; both in terms of time and economics.
